

## Connected solutions for commissioning Datacenter!

### Rentaload – Load bank/Heat load solutions & Services

Rentaload, based across Europe and leveraging many years of experience in manufacturing load banks, it's recognized by its wide range of smart and connected load banks/heat load Solutions & Services for Datacentres Commissioning offer.

The latest Smart & Low delta T range includes 6 kW and 7 KW rackable solutions and also floor-standing load banks of 100/200/300 kW. All units can be managed by using the **Rentalab Management Software** to simplify and reduce the time and number of people during your commissioning tests, which made this software and the new Smart & Low delta T range very popular particularly within the pandemic period.

Smart solutions to reduce time  
and do the commissioning  
more efficiently

These solutions will allow  
you to:

- Remotely manage and control your load banks
- Carry out very precise and coordinated tests (test script, load level and Delta T managed by software)
- Reduce the number of staff on site
- Reduce the duration of the tests
- Collect accurate real-time measurements of both electrical and thermal data (voltage, current, power, power supply, temperature etc.).
- Visualize your room in 3D
